Jerón Electronic Systems, Inc. Announces New 680 “Plus” Stations

Chicago, IL – Jerón Electronic Systems, Inc. introduces its new Provider 680 “Plus” stations and Dome Lights. The new sleek stations were designed for increased ease of use, simplified cleaning and enhanced aesthetics. In addition, the new “Plus” system includes more prominent corridor Dome Lights.

The visually clean design of the 680 Plus stations does not have any exposed fasteners or protruding parts, increasing their durability. Stations also include features such as tilt-action receptacles that allow for easy callcord removal without damage to the station. On-board lighting increases the visibility of the stations, making them easy to find in low ambient light. A sealed overlay protects every station and all pullcords are PVC-coated for simplified cleaning, making it easy to maintain hygienic standards. 680 Plus stations will also continue to encompass features of their predecessors such as: call priority levels, two-way voice communication and LED lights to indicate a call has been placed.

In addition to the station enhancements, LED Dome Lights have been upgraded with intensely bright lights and a larger dome lens to increase visibility in corridors. Two bright LEDs provide both excellent Dome Light visibility in high ambient light conditions while providing redundant illumination should one of the LEDs ever fail. Dome Lights are still fully supervised to ensure reliability.

This next generation of Provider 680 stations are more than a visual upgrade, the functionality of the system is also enhanced. “The introduction of the 680 Plus stations reflects Jerón’s commitment to meet the needs of today’s progressive healthcare facility.” says Ericka Chesnul, Jerón’s Vice-President of Marketing.

Jerón Electronic Systems, Inc. is proud to offer the health care industry the comprehensive line of Provider nurse call systems. Provider systems streamline the communication process, allowing caregivers to stay connected with their patients, and each other, while maintaining a strong focus on providing quality patient care.

From its founding in 1965, Jerón has earned a solid reputation for innovative engineering, quality manufacturing and service oriented sales support. Jerón products are manufactured in the USA at its Chicago headquarters.
