Provider 700 Nurse Call Automates Communications and Workflow Throughout Your Facility
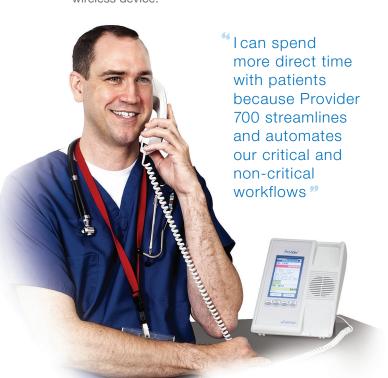

Leveraging a continuum of alerting, communication, and workflow options, Provider 700 supports your organization in reaching new levels of patient care. Provider 700's increased workflow efficiency with measurable results drive patient and caregiver satisfaction within a safe healing environment.

Provider 700 supports your patients and staff with a continuum of options creating a customized solution to meet your needs and budget for today with the flexibility to grow for tomorrow. This integrated system supports a facility-wide solution for wireless alerting and communications, real time staff locating, one-touch workflows, real-time dashboard displays, and activity logging with reporting. All of these advanced and flexible features easily scale to any size facility or campus.

Focused on Safety:
Reaching Your Safety Goals is Our Mission

Provider 700's multiple modes of alerting quickly notify caregivers of active safety risks and emergency situations to avoid 'never events'. Patient initiated and automated alerts indicate at dome lights outside of each room, at staff consoles and duty stations throughout the unit. In addition, active calls and alerts can indicate on large graphic displays in hallways, automatically announce through overhead pages, and instantly alert one or more caregivers' personal wireless device.

> " I can spend more direct time with patients because Provider 700 streamlines and automates our critical and non-critical workflows "

Patient Status Indicator
Dome lights outside each room identify each patient's status such as Fall Risk, NPO, or allergies

Bathroom Station with Two-Way Communication
Instead of risking a fall going back to bed, patients maintain their privacy while telling caregivers exactly what they need

Device Monitoring
Caregivers are notified immediately when an in-room device alarms; speeding response and minimizing alarm fatigue

Bed Exit Monitoring
If a fall risk patient gets out of bed without assistance, caregivers are instantly alerted

Provider 700's patient safety and alerting tools will assist you in reaching your organizations's safety and measurement goals.

Facility

Integrated Workflows, Rounding, and Team-Based Alerts

As a complete healthcare solution, Provider 700 supports cross-departmental workflows, rounding reminders, and facility-wide team alerts.

- Code Blue and Rapid Response buttons immediately alert caregiver teams throughout the facility
- Rounding buttons near each patient allows caregivers to set and acknowledge rounding reminders
- Workflow buttons automate processes between caregivers and interdepartmental (EVS, Transport, Food Service), providing more time for direct patient care

Customized to Meet Each Facility's Needs

Wireless Options Keep Caregivers Mobile While Still Connected to Their Patients

Provider 700 directly connects patients with their caregivers throughout your facility. Routine patient calls instantly alert the assigned caregiver's wireless device; caregivers can then talk directly to their patient remotely or go to the patient's room. More urgent calls automatically alert a caregiver team within the unit or throughout the facility. With Provider 700, no patient call goes unanswered; if a caregiver is tending to another patient, calls automatically route to the next caregiver on the team.

- Productivity increases with less wasted time searching for mobile caregivers
- Satisfaction increases from a quieter healing environment free from overhead pages to locate staff
- Automated public addresses such as "Code Blue call room 403, north wing" streamline team responses
- Wasted steps decrease with Real-Time Locating. Entering the room automatically clears any active calls or service requests while the level of staff (green, orange, or yellow) indicates at the dome light outside the room

Provider 700's Mobile Options

Automatically Register Caregivers In and Out of Patient Rooms

Text Alerts of Patient Calls to Smartphones and Pagers

Remote Patient Call Answering Over Wireless Phones

Automated Overhead Pages of Critical Events

"We want a nurse call system that keeps our staff mobile to quickly assist our patients. Provider 700 gives us these mobile alerting tools"

Data Network Architecture for a Flexible and Unified Solution

Ethernet and Voice over IP technology is at the heart of both of Jeron's Provider Nurse Call platforms: the Provider 700 and Provider 790. These two platforms share a common nurse call network allowing both platforms to work together as a single unified solution.

- The flexibility of the cross platform integration between Provider 700 with Provider 790 allows both systems to be intermixed to provide the best overall value across an entire facility by sharing the same network, integrations, and call activity reporting

ProVider® 700
&
ProVider® 790

- The networked nurse call architecture, including fiber connections for campus-wide communications, supports remote access to the entire system for troubleshooting, programming, and integrations

- The facility-wide architecture supports flexible call routing including decentralized operation (each unit answers its own patient calls), centralized operation (all patient calls route to a central area) and any combination in between

- A readily scalable network solution lets you easily add nursing units and areas as budgets and schedules allow

Reliable Solutions with a Low Total Cost of Ownership

Provider 700's safety and dependability is backed with Underwriters Laboratories "UL 1069" safety certification for nurse call equipment along with Jeron's industry leading 5 year warranty. As part of the Provider 700 solution, all software updates from Jeron are included at no cost for the life of your system.

C **UL** US
LISTED
UL 1069

5 YEAR WARRANTY

- The system's 24/7 embedded architecture is immune from potential virus attacks or hard drive crashes

- Standardized category cable and connectors reduces installation costs and simplifies service

- Built-in supervision of all nurse call components automatically reports any device issues directly to a technician's wireless device

- Any system issues are diagnosed quickly with remote system administration

- No recurring SMA (Software Maintenance Agreement) or software subscription costs means no unexpected costs down the road

- Jeron's local factory trained and certified distributors provide a turn-key integrated solution with timely local service and support

Schedule a Visit to the ProVider® TECHNOLOGY CENTER
