

# STAFF MOBILITY

**Provider<sup>®</sup> 790**  
Nurse Call System

## Connecting Caregivers to Support Team Care Models

Provider 790 Nurse Call System integrates with many flexible options to extend Nurse Call well beyond the nursing station and the patient room. These flexible and scalable options keep staff mobile leading to increased satisfaction for patients and staff.

### Facility-Wide SIP Wireless Phones

Provider 790 readily integrates with the most popular SIP (Session Initiated Protocol) in-house wireless phones to route active patient calls directly to their assigned caregiver anywhere throughout the facility. Answering calls directly, caregivers can reassure patients and find out what they need before going to the patient's room. Wireless phones keep the facility quiet from unnecessary overhead pages as staff can directly communicate with each other instead of disruptive overhead paging. For high priority calls, such as a Code call for the Crash Team or a unit-wide Staff Emergency call, the entire caregiver team is instantly notified of the event no matter their location.

Seamless Integration with the  
Most Popular Wireless Phones

### Text Alerts & Pocket Paging

As another alerting option, when a patient places a call a text message is immediately routed to the assigned caregiver's pager or phone showing the room, bed, and call priority. If a caregiver is occupied, their alert is automatically routed to the next caregiver in the team to speed the response. High priority calls/text messages, such as Bed Exit or Staff Emergency, are routed to caregiver teams allowing the closest team members to assist as quickly as possible.

Caregivers  
Remain Mobile  
& Connected

## Real-Time Locating

Seamless integration to the most popular real-time locating systems automatically updates each staff member's location to streamline workflows. As staff members enter and exit patient rooms, they are automatically logged into patient rooms indicated by the dome light outside each room and at each nurse console. Making their job easier, each time they walk into a patient room any outstanding service requests or patient calls are automatically cleared.

## Nurse Call and Workflows on Any Networked Computer

Easy access to real-time information is at the forefront of Provider 790's LAN-based PC Console Activity Display. From any Windows<sup>®</sup> computer on the facility's LAN, PC Console displays a customized view of system activity, staff locations, active workflows and roundings to an unlimited number of users.

## Automated Overhead Paging

On its own or to complement wireless phones or pocket pagers, automated overhead paging announces high priority patient calls over corridor speakers. To minimize disruptions, only high priority calls such as Bed Exit or Door Alarm can be programmed to announce over corridor speakers. This automated audio page gives the exact location and type of call for a quick staff response.

## Scalable Integration Solutions

The flexibility of Provider 790 gives facilities the wireless and alerting options that best support their workflows and budgets. When needs change, these options can be easily added to an existing system without requiring additional Nurse Call hardware or wiring. Utilizing these multiple alerting options quickly notifies caregivers of an urgent situation or patient need ensuring a timely response.
