

Prioritizing Patients, Clinicians, and Procedures for Streamlined Workflows & Increased Throughput

Provider 790 Nurse Call System's integrated clinic features let clinicians manage their workflow and patient flow resulting in a better clinic experience for both patients and staff. Bottlenecks are readily identified and can be addressed before affecting patient satisfaction.

Simplify clinic-wide workflow alerting and communications through automated processes. Clinic status stations within each exam and procedure rooms combined with visual indicators outside each door:

- Manage up to four simultaneous patient/clinician status for each room
- Request up to eight clinicians with the In-room station; each clinician has their own unique color indicator
- Direct clinicians to their next patient and indicates all patients waiting to be seen
- Remotely direct patients to their exam rooms
- Show patient status (ready to be seen, currently with clinician and how long they have been waiting to be seen)
- Support VIP "See Me Next" with a single button press

Insight Across the Facility

Outside each exam room is a multi-color, multi-sequenced dome light indicating status changes reflecting patient, nurse/technician, doctor, staff locations, procedure times, and more. Corridor dome light colors and flash rates are customized to suit the needs of your facility.

Clinic-Based Reporting Options

Expanding on Provider 790's Nurse Call reports, the clinic-based reports support improving patient satisfaction and clinic throughput:

- Patient Report: shows wait times and total time spent in the room for each roomed patient
- Staff Report: shows the number of patients visited by each clinician

Anywhere – Everywhere Access

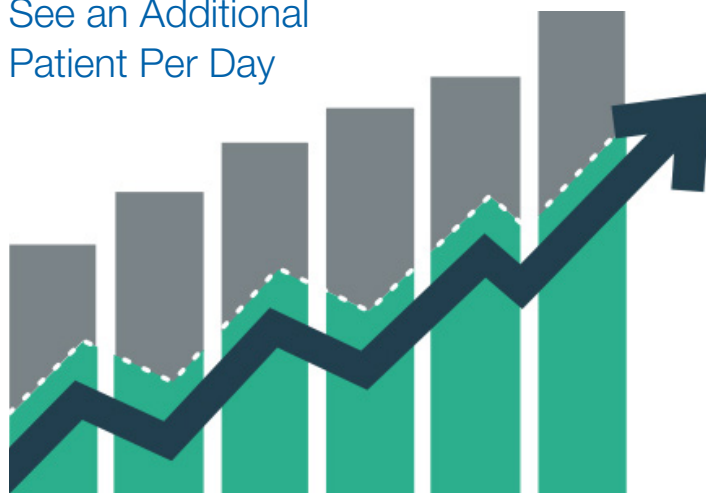

At central areas and where staff congregate, wall-mount displays indicate multiple views for all rooms in the area. Additionally, room status can be seen on any PC on the facility's LAN. Everywhere access to clinic room status readily identifies bottlenecks that could adversely affect both staff efficiency and patient satisfaction.

An Integrated Nurse Call Solutions

Clinics will now have access to all of the flexible alerting, workflow, and wireless communications options already available on Provider 790 Nurse Call Systems including:

- One-touch workflow operations to streamline processes and procedures across departments
- Integration with most popular in-house SIP wireless phone systems; routing patient calls directly to the assigned caregiver
- LAN access to administrators for daily functions such as assigning staff to patients and generating call response reports
- Ethernet backbone to easily interconnect an entire facility on a single integrated nurse call and clinic solution
