

Streamlined Workflows Within and Across Departments

The Provider 790 Touchscreen Staff Terminal streamlines notifications and communication within and across departments freeing you to concentrate on giving the best possible patient care. With a single touch, you are in hands-free digital audio communication with staff at any Nurse Console or Staff Terminal throughout your entire facility. With another touch you've requested Transport to move a patient or request a doctor consultation. The automated workflow operation means Provider 790 will follow-up if the request isn't cleared within a preset time period.

Customized Touchscreen Operation to Meet the Needs of Every Area: Emergency Department, Med/Surg, and Surgery

Touchscreen Features:

- Customized for each area's specific needs
- Hundreds of workflow processes available
- Automated time intervals between workflows
- One-touch operation for intercom and workflows

A Facility-Wide Solution

The Touchscreen Staff Terminal extends beyond patient areas to network throughout your facility. The Staff Terminal is perfect for the Emergency Department, patient rooms and staff areas in Med/Surg Units, Surgical Departments, Labs, Clinics and practically anywhere staff need to communicate with each other or coordinate workflows. The Provider 790 life-safety network ensures 24/7 system availability within a single building or across a hospital campus.

Simple Touchscreen Graphical Operation

Up to Sixty Customized Buttons:

- Rounding & Reminders
- Call placement
- Clinician sequencing
- Workflows
- One-touch staff communication

Workflow and Nurse Console Operation

Hands-Free Communications

Streamlined Communications

With a single button press, a Staff Terminal can call any other Staff Terminal or Nurse Console throughout the facility. If staff are sterile or their hands are occupied, they can respond hands-free from anywhere within the area. At each Staff Terminal, caregivers choose how they want to answer intercom calls: immediate hands-free audio connection, acknowledging the call to answer it, or placing a Staff Terminal into privacy so they can't be disturbed. This streamlined staff to staff communication is yet another way Provider 790 keeps the lines of communication open.

Automate Processes within Units and Across Departments:

- Automated reminders for outstanding workflows
- Team notification for missed workflows
- Hands-free communication
- Touchscreen staff to staff communication

One-Touch Workflow

Provider 790's workflow features eliminate time-wasting phone calls and noisy overhead pages to relay and follow-up on workflow events. Staff are alerted to their outstanding workflow events by a pocket page message, a text message to their smart phone or in house SIP phone, or through the active workflow display from any computer on the facility's LAN. Examples of one-touch workflow operations include:

- TRANSPORT NEEDED** Notifies Transport to the room to move a patient
- ROOM DIRTY** Alerts Environmental Services to clean the room
- NEED DOCTOR** Pages the attending physician
- NEED CONSULT** Text messages the consulting physician to the room
- LAB NEEDED** Pages the phlebotomist to the room
- X-RAY** Alerts Radiology to bring the portable X-Ray

With Provider 790's automated workflow operations there are fewer tasks and follow-ups to track, providing more time for direct patient care.
