

SMARTPHONE ALERTING AND COMMUNICATIONS

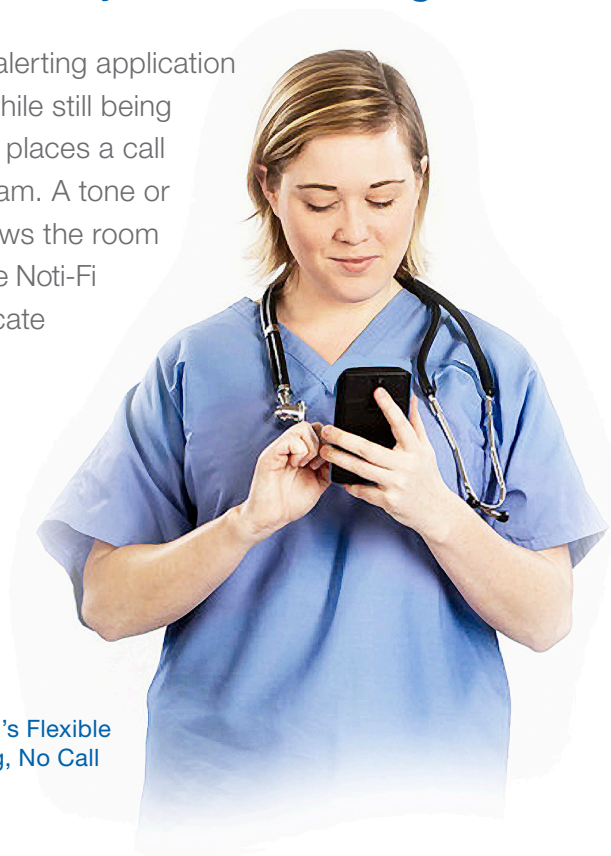

Provider[®] 700
Nurse Call System

STREAMLINE CARE

Patient/Resident Nurse Call Alerts Go Directly to Their Caregiver

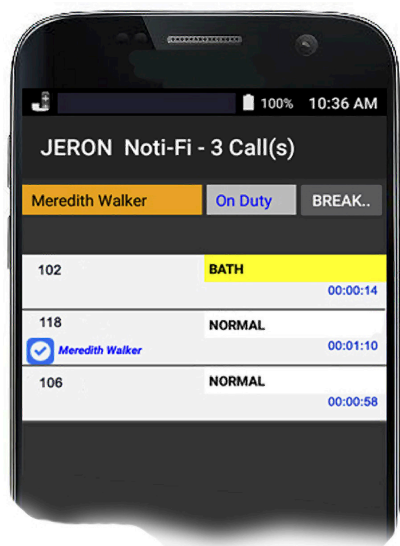

As part of the Provider 700 system, the Noti-Fi smartphone text alerting application with optional voice communication supports caregiver mobility while still being connected to their patients or residents. When a patient/resident places a call on the system, a text alert instantly routes to their caregiver or team. A tone or vibration notifies caregivers of an active call while the display shows the room number, call priority, and how long the call has been active. With the Noti-Fi voice option, caregivers can also answer active calls and communicate directly with their patients/residents.

Noti-Fi gives you flexibility and value by using the technology you already have in place. No cell phone data is required because patient/resident call notification is sent over the existing Wi-Fi LAN. Any Android* phone or tablet can be used for Provider 700 nurse call alerts; facilities can use existing phones/tablets or staff can use their own devices.

With Noti-Fi's Flexible
Call Routing, No Call
is Missed!

 **Noti-FiTM**

Focused on Patient/Resident Safety & Satisfaction:

- Speeding response times with direct wireless notification to caregivers
- Supporting a quiet environment by reducing disruptive overhead paging
- Directing caregivers to the most urgent calls first
- Supports transparency and accountability - all patient/resident to caregiver interactions are logged into an optional reporting package to confirm a timely response
- No call goes unanswered - caregivers are automatically alerted when a call has been waiting too long
- Reassure patients/residents with direct communication - finding out exactly what they need and comforting them with a timely verbal response

* Android version 6.0 and later

With Noti-Fi's Flexible Call Routing, No Call is Missed

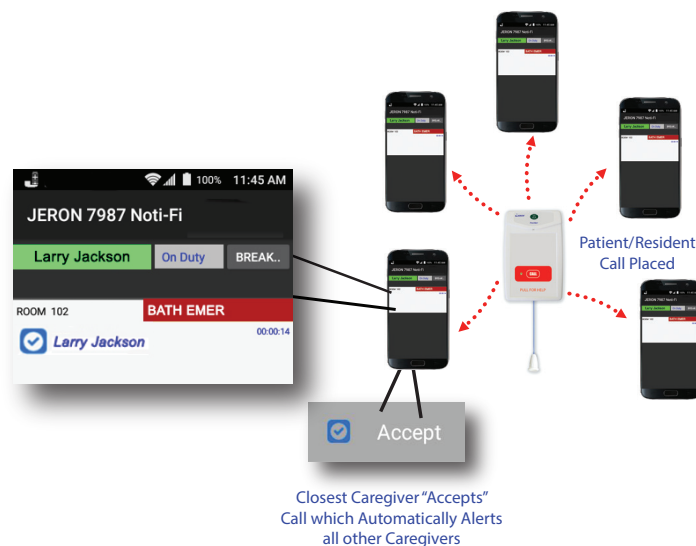

Primary Caregiver Alert

Caregivers can back up one another when they respond to patient/resident calls. If the first caregiver is busy and cannot respond, the next caregiver in the team is automatically alerted.

Team Caregiver Alert

Patient/resident calls simultaneously alert multiple caregiver's smart devices. The closest available staff member "Accepts" the call and responds. Other caregivers are notified who has accepted the call. In emergency situations, all team members can respond.

Noti-Fi's Intuitive Design Allows a Full View of Active Calls and their Duration

- A tone and/or vibration alerts staff to a new resident call
- "Accepting" a call alerts other caregivers on the team, minimizes steps and prevents multiple people from responding to the call
- Patient/resident calls continue to display on a locked phone or tablet
- Staff manage their On/Off Duty and On Break status directly from their phone or tablet

Jeron's Provider 700 Nurse Call System with the Noti-Fi application keeps caregivers mobile and ready to respond to their patient/resident needs.
