

**Ensuring a Safe Response for Both Patients and Caregivers**

An increasing number of areas within existing and new facilities require physically hardened anti-ligature stations. Provider 700 offers a full selection of code-compliant nurse call alerting and communications solution for any type of behavioral application.

*Patient facing devices are heavy gauge steel and anti-ligature with vandal-proof buttons and speaker grills*

**Patient Area Device Options Include:**

Dome Light/  
Room Controller

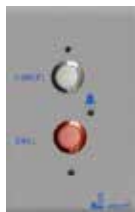

Keyswitch

2-gang Patient  
Intercom Station

3-gang Patient  
Intercom Station

Pushbutton  
Station

Touchscreen  
Console

**High-Security Flush Dome Light:** indicates active calls within a room or area. High intensity LED active call indicators are readily visible down a long corridor.

**High-Security Intercom Stations:** patients and staff members can place calls for assistance and communicate directly with the Staff Console or wireless devices carried by staff. Calls from these stations indicate at Dome Lights outside of the respective room. The station includes the ability to cancel the call from the station itself or remotely from a keyswitch outside the room.

**High-Security Emergency Call Station:** for the bathroom and other key staff and patient areas, one touch initiates a bath, emergency, or code call that indicate at the associated Dome Light.

**Keyswitch Activation/Reset Station:** for secured rooms, the keyswitch allows staff to enable and disable calls from being placed within the associated room. Where staff need to remotely reset an active call, the keyswitch can reset one or all active calls within an associated room.

In key staff areas, the Touchscreen Staff Console alerts staff to active patient and staff calls. From the Console, staff can answer calls and communicate directly with staff and patients to assess the situation and direct staff to respond in person. In addition to the Console, the Jeron Provider 700 system includes options for wireless alerting directly from patient to caregivers, activity logging and reporting on all patient/staff interactions, and many other workflow, alerting, and communication options.

*Provider 700 Behavioral is part of the complete Provider Nurse Call and Workflow Solution which can be integrated across an entire healthcare facility supporting a facility-wide solution.*
